

The installation of contactors and the replacement of the coil are very easy and do not require **special tools**.

A fundamental characteristic of **NEW ELFIN** contactors is their exceptional modularity. The **SMALL**, **MEDIUM** and **LARGE**

series all have the same accessories. This allows to work in a more functional way and optimise costs, unlike the products offered by our competitors.

Thanks to the very compact **dimensions** of NEW ELFIN contactors, the installation procedure is very easy, even in particularly difficult situations. The operator responsible for their installation will gain huge benefits during both design and implementation phases.

Technological evolution aimed at exceeding the products offered by our competitors is clear in the contactors of the X LARGE and XX LARGE series, which are fitted with an **AC/DC electronic coil**.

Relays in series of the same level **cost** the same, in order to streamline the management of purchases. This is an opportunity to be taken into serious consideration, making particular reference to the price range currently offered by the market.

Unlike what is required by other types of products, **weight** is an important aspect for contactors, with greater weight corresponding to increased efficiency and long operational life.

Duration is fundamental in order to guarantee a constant work flow and optimise the investment: NEW ELFIN contactors guarantee an average of 25,000,000 cycles of mechanical life and 2,500,000 cycles of electrical life. These characteristics place our contactors at the top of the international production.
